**PATIENTS TO CONSIDER** 802 mg

**Name:** Lisa  
**Sex:** Female  
**Age:** 37

History: Lisa had her first psychiatric break and was diagnosed with schizophrenia at age 20. In the 10 years that followed, she experienced changes in her emotions, thought processes, and thought content. Lisa eventually began experiencing negative delusions.

"My thoughts were so cluttered that I had a really hard time taking in what, if any, people was concerned that my 'mood' was rising."

Lisa was afraid of making negative choices. These symptoms began, but she reluctantly agreed to start treatment and her first several antipsychotic medications. Lisa was started on ARISTADA 802mg and she felt great relief from her troubling symptoms.

**ARISTADA treatment:**

- Dose: 802 mg 1x per week
- Dosing form: oral, 30-day
- Injection site: gluteal

**802 mg**  
**Class:**  
**Monotherapy**
